

Matangi

This map has been generated following the procedures outlined in the "Modelling base stock carrying capacity (BASE) for the earning capacity rental project" report.

BASE represents an estimate of the original stock carrying capacity of a property, recognising the vegetative cover at the commencement of leasing, and reflecting changes that may have occurred over time had no improvements been undertaken to the land.

The land use capability (LUC) labels and linework are from the land resource inventory. The number below the LUC code is an estimate of stock units that that polygon should carry as an annualized figure. Very low figures in class 8 polygons mostly reflect different mapping techniques between LUC and BASE and represent negligible carrying capacity.

Notes:

1) The BASE estimates provided on this map are indicative only and based on modelling up to March 2011.

2) land use capability polygons of less than 50ha are not labelled on this map. A summary table of stock units by LUC type is provided on a separate page.

Legend

ECR BASE

Carrying Capacity (SU/ha)

	< 0.05		0.4 - 0.5
	0.05 - 0.1		0.5 - 0.65
	0.1 - 0.15		0.65 - 0.8
	0.15 - 0.25		0.8 - 1
	0.25 - 0.3		1 - 2
	0.3 - 0.4		> 2
