CC1 - Limestone Outcrops

- The three limestone outcrops are a prominent natural feature forming a distinct and special landform in a landform dominated by greywacke hills and alluvial terraces. Their visibility from State Highway One gives them a high scenic and aesthetic value.
- The limestone habitat is uncommon in the ecological district and supports a representative range of limestone dependant species including a large number of indigenous species.
- The outcrops support a diverse range of plant communities including plant species representative of the original flora.
- The limestone outcrops support five threatened plant species – *Melicytus* aff. *Alpinus* “Waipapa” (gradual decline), *Pleurosorus rutifolius* (sparse), *Epilobium wilsonii* (range restricted), *Poa acicularifolia* (range restricted) and *Wahlenbergia matthewsii* (range restricted).
- The limestone outcrops are an important refuge and breeding habitat supporting two threatened animal species – darkling beetle *Mimopeus parallelus* (nationally endangered) and Kaikouras gecko (range restricted).

¹ State street address not Post Office Box number.

CC2 – Middle Hill Hut

- The area forms an integral part of the surrounding Conservation Area contributing to the visual landscape values of the Kaikoura Range.
- The area provides potential for the regeneration of indigenous vegetation from seed sources including remnant beech forest from the surrounding Conservation Area.
- The area supports the threatened lizard species Kaikouras gecko (range restricted).
- The wetland area within the covenant area provides considerable habitat diversity for invertebrate species due to the rarity of wetlands at mid altitude in the region.
- The management of the area needs to be complimentary with the management of values on the surrounding Conservation Area.
