The land is characterised by the following significant inherent values:

- 1. Areas of high natural value assessed using PNA Programme criteria for selecting priority natural areas
  - forest and shrubland communities representative of the lower-altitude plant communities in the southern part of the Wither Hills Ecological District; probably one of very few such remnants and the best known opportunity for protection of this vegetation sequence in the Wither Hills Ecological District
  - contains plant communities that represent a transition between the inland mountain ranges of Marlborough and the lower dissected hill country to the north; a transition between two ecological districts (and regions).;
  - represents the best riparian (streamside) plant communities on the property in the Blairich catchment;
  - includes the only location on the property where the typically-lowland forest species, kaikomako and narrow-leaved lacebark, were found the latter is now rare in Marlborough, as its lowland habitat is almost extinct;
  - contains a diverse range of plant communities, including mixed hardwood forest remnants, streamside forests, scattered shrublands, and open rock plant communities;
- 2. Areas which sustain the most culturally valued attributes (eg. scenic, aesthetic, recreational and historic) and their context within a high country landscape:
  - it is a scenic area containing interesting landforms and an attractive mix of vegetation types;
- 3. Areas which make a special contribution to the overall quality, natural functioning and ecological integrity of significant values through linkages and buffers
  - represents one of the best opportunities to protect a lowland area in this part of Marlborough, with considerable potential for regeneration of the original forest communities

All the above values being particularly described in the Department of Conservation Resource Report to the Commissioner of Crown Lands dated 30 August 2001.
