RELEASED UNDER THE OFFICIAL INFORMATION ACT

Photos 3 and 4 Area B. Valley draining from crest of Hunter Hills to north branch of Waihao River between spur track to Mt Blyth and fenceline descending from spot height 888 on the crest of range. DoC recommended this area for protection to provide a full altitudinal sequence of snow tussock and shrublands from the crest of the range to the Waihao valley floor.

Photo 5 Area A. The area has high integrity and natural character given the absence of tracking or structures, and the dense, healthy and natural *Chionochloa rigida* grasslands.

Photo 6 Increased bare ground with erosion potential as result of recent burning of *Chionochloa rigida* grasslands below the ridgeline track, on the northern section of Kaiwarua. Grazing and burning will not promote ecologically sustainable management.

Photo 7 Area E, Kaiwarua. Snow tussock grassland in valley draining east to Otaio River. Taken from crest of Hunter Hills.
