SCHEDULE 3

MANAGEMENT PRESCRIPTION DOCUMENT FOR MT JUDAH BLOCK SHEEP GRAZING CONCESSION

As this concession is for a term exceeding 10 years a management prescription document is required. A management prescription in the concession conditions provides, over the full term:

1. The specific goals of management of the land consistent with the nature of the concession activity (covering vegetation, landscape, historic, public recreation, soil and water).
2. A description of how the goals are to be met.
3. A detailed description of the type and condition of historic resources at the commencement of the concession.
4. A description of the vegetation monitoring programme (of activity effects) to be carried out.
5. A specification concerning grazing systems, including identification of vegetation trends and how that will affect the grazing systems.

This management prescription document shall apply until it is reviewed ten years from the date of commencement of the concession and every ten years thereafter, dependent on renewal of the concession for a further term.

1. The goal of the concession is to achieve the protection of historic sites, landscape values, vegetation, soil and water values and recreational opportunities whilst allowing for limited sheep grazing.

(a) Vegetation

To manage the vegetation within the concession area to maintain or enhance the cover of native and introduced grass and herb species, native shrub and forest communities whilst minimising the risk of invasion by exotic woody weeds and trees.

(b) Landscape

To manage the concession area in a manner which retains and enhances the open landscape character and maintains and enhances the physical presence of visible historic features associated with the Glenorchy Scheelite mining activity which include abandoned mines, mining equipment, transportation systems and hut sites.

(c) Recreation

To facilitate public foot access within the concession area to places of historic interest. The Mt Judah "road" within the concession area will be available for foot, mountain bike and possibly horse access. This route also provides access for trampers

into the Richardson Mountains proposed conservation area. Appropriate interpretative information and sign posting will be erected where required.

(d) Soil and Water

To manage the concession in a manner which prevents soil loss and maintains high water quality.

2. These goals are to be met through regular monitoring (including general inspections), liaison with the Concessionaire and revision of grazing limits prior to the preparation of future management prescription documents.

(a) Grazing levels and management will be adjusted should that be necessary following analysis of photo point monitoring and field observations by the Grantor or Concessionaire.

(b) Boundary sign posting indicating the status of the land and conditions pertaining to public use will be erected.

(c) The concession document requires the Concessionaire to comply with the legal obligations of the Biosecurity Act.

A goat control programme will be jointly agreed to by the Concessionaire and the Area Manager Department of Conservation, Queenstown which will determine what method(s) are to be used and where.

3. Description and condition of historic resources present.

A rich legacy of abandoned mines, mining equipment, transportation systems and hut sites dating from the early 1900s remains in situ. The opportunity exists to preserve and interpret to the public this important aspect of New Zealand's mining history. Ownership of the mining equipment on abandoned claims has now reverted to the Crown and will become the responsibility of DOC when the land becomes conservation land.

4. Description of a monitoring programme to be established for vegetation condition and soil and water values

A system involving a combination of medium scale landscape photography and small scale photography is intended to be applied.

It is considered that any detrimental impacts of grazing will occur on the higher altitude tussocklands and alpine vegetation, and monitoring will target these areas. Within this zone will be sites of greater vulnerability, in particular seepages and flushes. These sites are likely to be the first to exhibit signs of degradation and will be the focus of the small scale habitat photography. A series of 1 sq. m plots permanently marked with corner pegs, will be established in a range of these habitats. These will be

- photographed from directly above (ie. vertically above the plot) with a wide angle lens to maximise plot coverage in the image. 12 - 15 plots of this type will provide an adequate sample. Digital analysis of photos can be carried out to assess changes in cover, species composition, etc.

The medium scale landscape photography will target representative landforms and features, ie., ridgecrests, valley bottoms, midslopes and include varied aspect. Photopoints will be permanently marked with waratah standards with records kept of lens angle, film type, direction, etc., to enable near identical repeat photography. 10 - 15 photopoints of this type will suffice to provide a broad overview of gross vegetation changes.

Site selection will be carried out in late spring/early summer. Repeat photography will be undertaken at yearly intervals.

5. Number of stock and duration permitted to be run on the concession area within the current term of the management prescription document.

700 wethers for 5 months from 1 November to 1 April or not more than 1000 wethers for a lesser period and not to exceed 230 s.u. on an annual basis.
