Starting soon...

# Aotearoa Property Data Network

5th General Webinar - 10am-12pm, Tuesday 18 July 2023

18 July 2023

# Opening karakia

Whāia te mātauranga  
kia mārama, kia tupu,  
kia tiaki ngā whenua,  
ngā moana, ngā arawai

Kia whai take ngā mahi katoa

Aroha atu aroha mai,  
tātou i a tātou

Toi te kupu

Toi te mana

Toitū te whenua

Haumi ē, hui ē, tāiki ē!

Pursue knowledge for  
understanding, developing  
and caring for the lands,  
bodies of water and waterways

Seek purpose in all that we do

Let us show respect  
for each other

Hold fast to our language

Hold fast to our spiritual strength

Sustain the land

Gather and go forward together

# Agenda

10am-10:05	Welcome and opening karakia
10:05-10:20	<b>Toitū Te Whenua   LINZ</b> news and updates <i>various Toitū Te Whenua stakeholders</i>
10:20-10:40	<b>Te Kooti Whenua Māori   Māori Land Court</b> - Live demo of the newly launched Pātaka Whenua   Māori Landonline <i>Zeniff Haika, Puna Kōrero Matua</i>
10:40-11am	<b>Toitū Te Whenua   LINZ</b> - 'Joined-up Land Development' innovation initiative <i>Ben Reilly, Customer Relationship Manager – Property &amp; Spatial Data</i>
11am-11:55	<b>Emergency management lightning talks</b> <b>Auckland Council</b> – red/yellow stickering of properties after flood events <b>GNS</b> – assessing landslip risks to property <b>Manaaki Whenua   Landcare Research</b> – Māori frameworks for recovery <b>Toitū Te Whenua   LINZ</b> – emergency management data portal
11:55-12pm	Closing comments and karakia

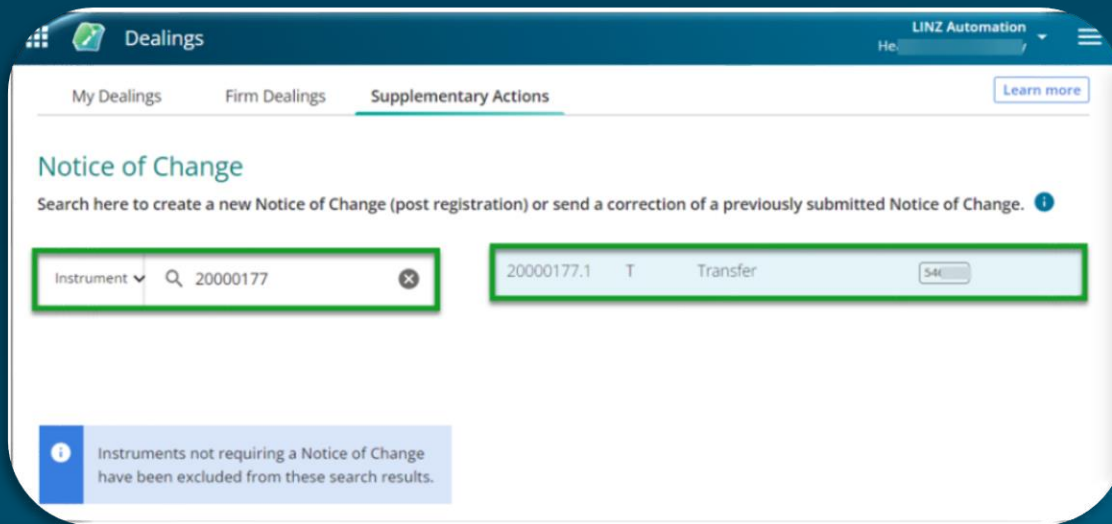

# LINZ News & Updates

 Miramar buildings rendering

# Notice of Change

- All 67 Territorial Authorities now signed!
- Solicitor uptake figures >80%
- NEW: Post-registration and correction NoC

# Connected Property Data

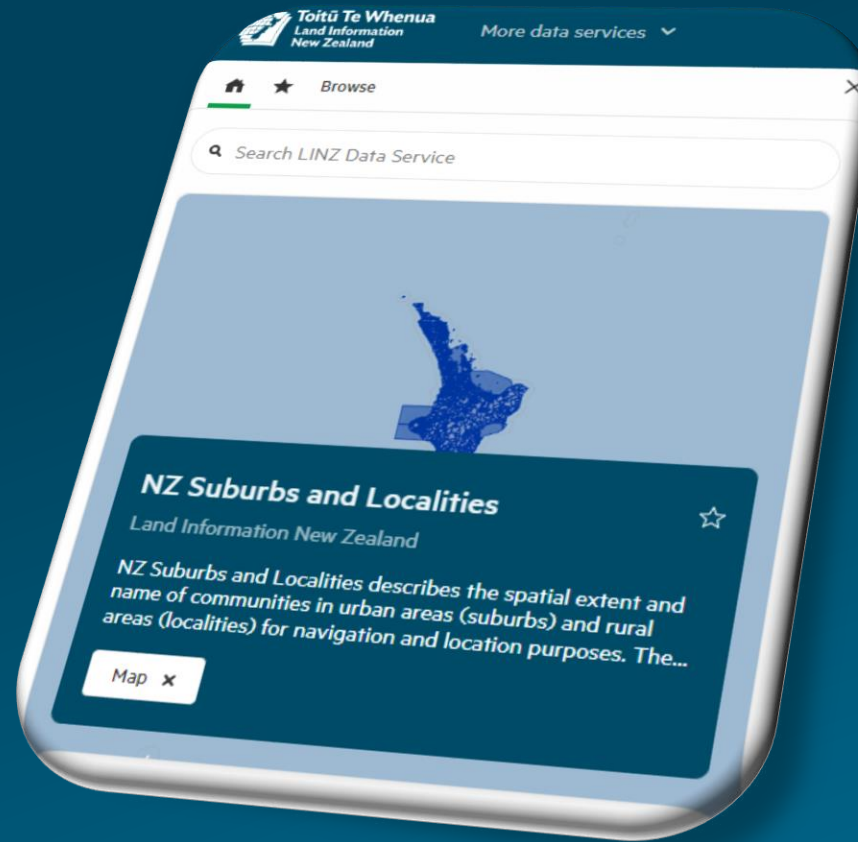

- Hybrid layer restricted access
- Exploring next steps, including wider availability
- Parent/child update to NZ Properties
- UUID – Universally Unique Identifier for NZ Properties
- [Release 1.2 of PDMF published in May](#). Lessons learned from dwellings pilot with Stats NZ.

# NZ Suburbs and Localities

- Published June 2023

# Joined-up Land Development

 New subdivision, Auckland

# The Problem

Resource consenting is too hard and takes too long because it is disjointed, labour-intensive, and lacks transparency.

This leads to project congestion, additional costs, and prevents evidence-based decision-making.

No visibility of development pipeline for LINZ Property Rights teams, so cannot anticipate resourcing needs.

# Context

Deficits

Population

Complexity

Climate

# Joined-up Land Development

Integrated land development process

Increase transparency

Promote efficiency

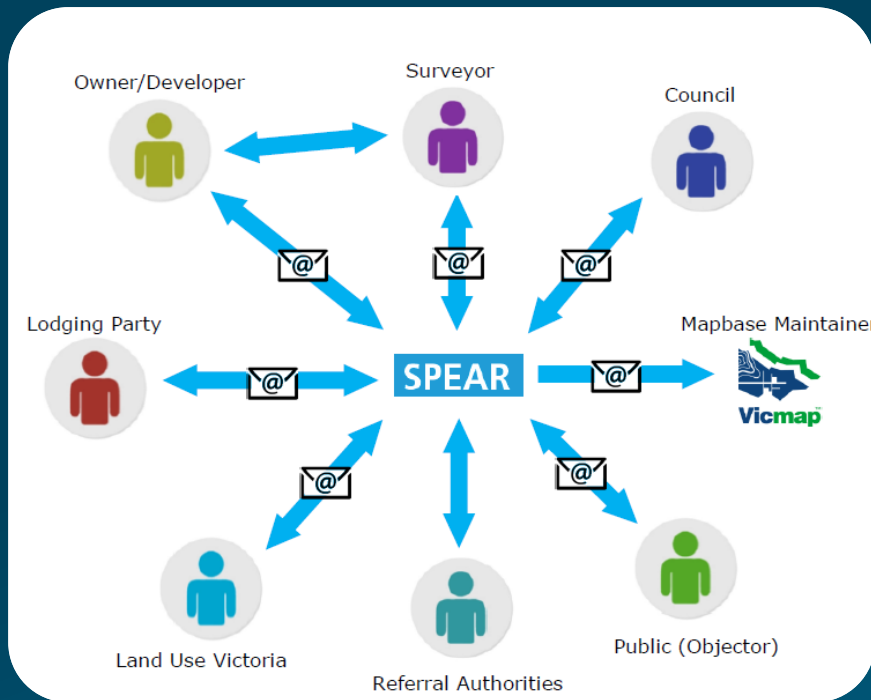

# Overseas examples

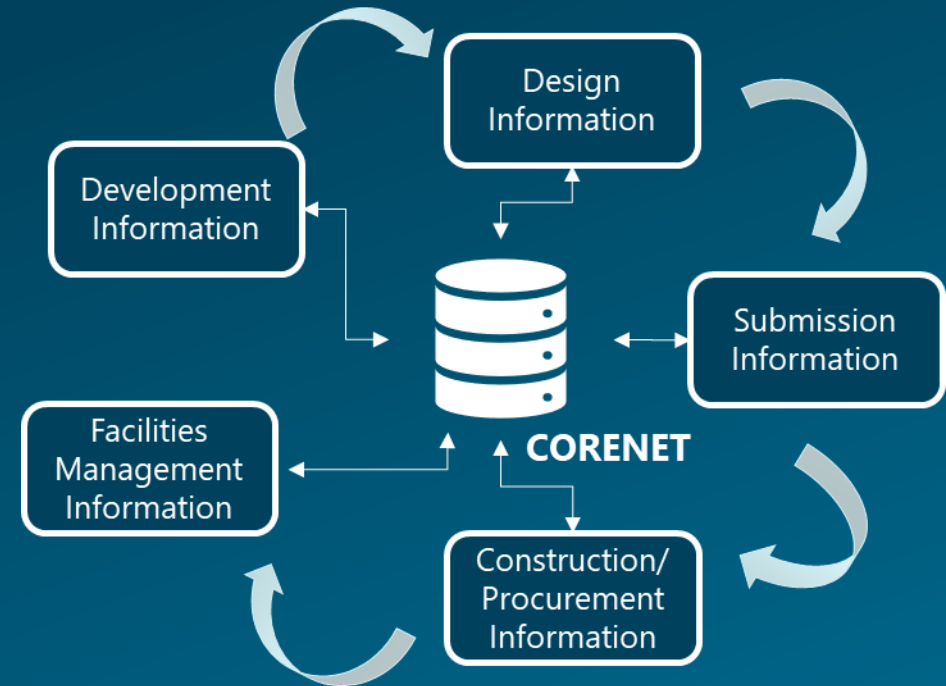

**SPEAR** (Surveying and Planning through Electronic Applications & Referrals)

**VIC, Australia**

**CORENET e-Submission Singapore**

# Why LINZ?

Property system stewards

Stakeholder networks

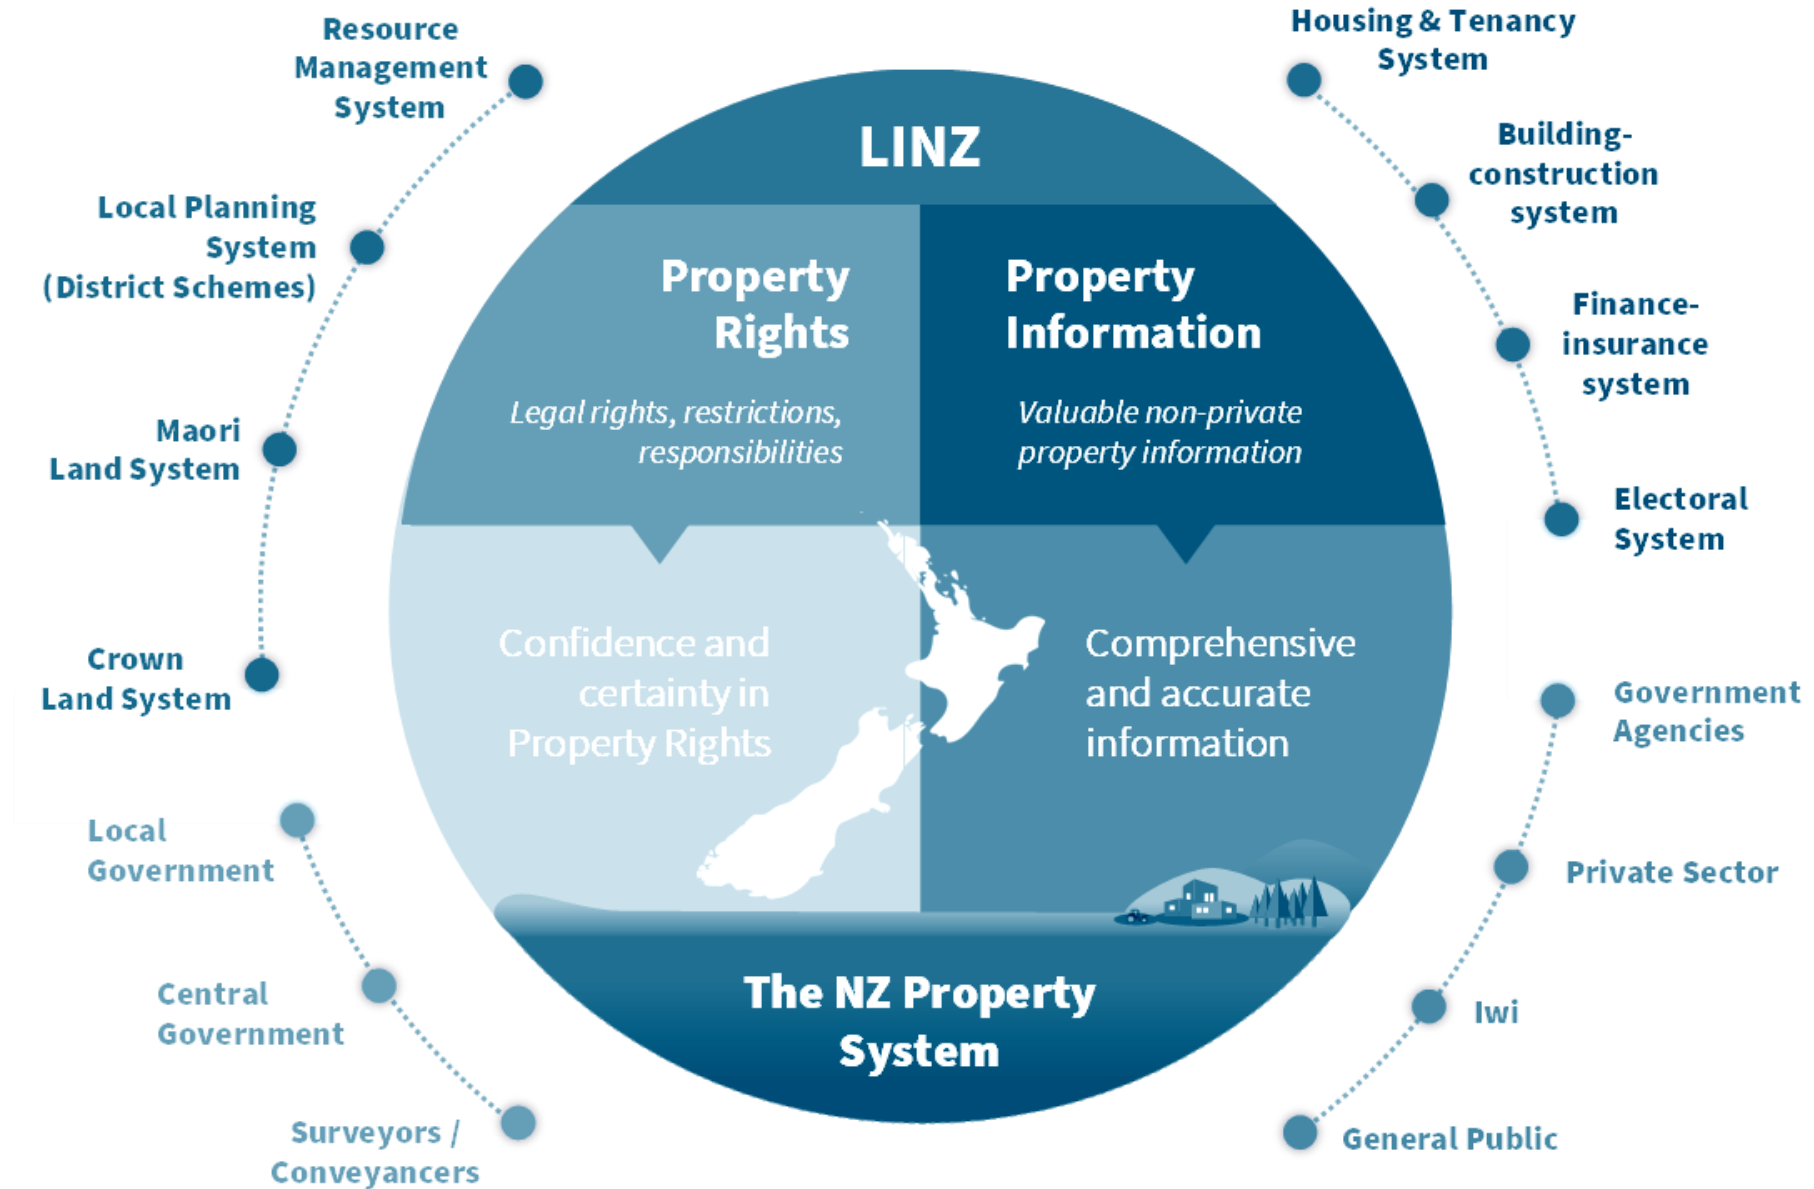

Regulatory roles

IT build capability

# Problem definition and benefits-casing

We want to hear from:

Central government agencies

Te Ao Māori

Local councils and associated authorities

End-customers in land development

Technology experts

# Indicative roadmap

# Auckland Council AEM – Rapid Building Assessment Placards

Property Data

xxxxx 2023

## Context of issue

- Auckland was hit with its first regional natural disaster (of recent times) during 2023 Auckland Anniversary weekend, 27/01/2023, which resulted in the Mayor activating the State of Emergency for the first time in Auckland's history.
- This was a 1 in a 200-year event which resulted in an entire summers worth of rain falling in a matter of hours
- Only weeks later in February we were hit with Cyclone Gabrielle. Following this we were hit with a localised tornado in April and another flooding event early May.
- During a State of Emergency, councils have access to MBIEs Survey 123 application for inspectors to do Rapid Building Assessments but how do we get this information brought across from a Central Government database into our AC database.
- How are we learning from past mistakes and future proofing procedures, so we are in a better position when the next disaster strikes?
- What does this the information mean for us in terms of Property Files and LIMs?

# AEM Disaster Images

## RBA Placards, What do they mean?

**Entry  
Prohibited –  
Heavy  
Damage  
(High Risk)**

- At risk from external factors such as adjacent buildings or from ground failure.
- Significant damage

**Restricted  
Access –  
Moderate  
Damage  
(Medium Risk)**

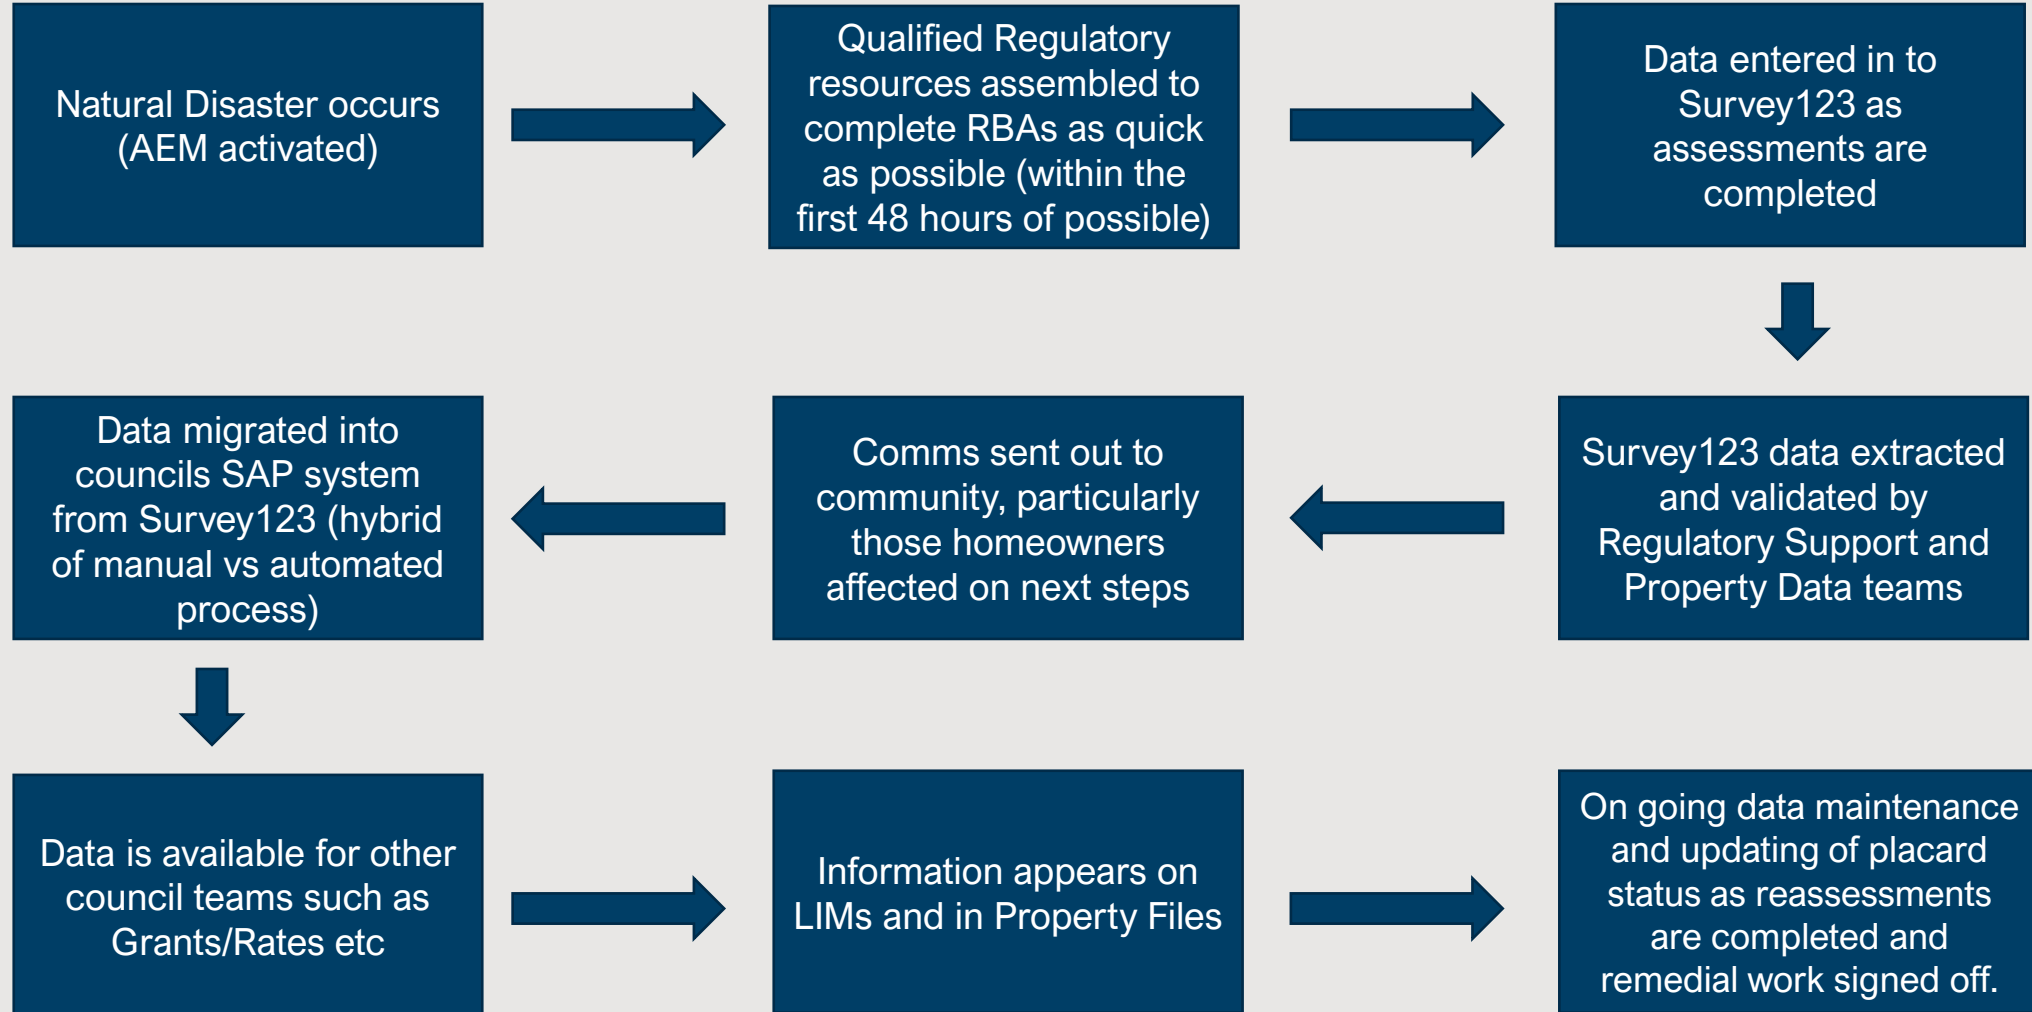

- No entry to parts of building with significant damage.
- Entry restricted to removal of contents and securing work OR until contractors can further access damage.

**Can be used –  
Light to no  
damage  
(Low Risk)**

- No immediate further evaluation required however owners may wish to of their own accord.

# Our Process – High level

# What are our legal obligations for Property Files and LIMs?

Council has a legal obligation under Section 44A(2)(d) and (g) and Section 44A(3) of the LGOIMA Act. to disclose of any information, we have regarding to the history of the property on the LIMs and in the PFPs. Wording applied to LIMs is at a high level and indicates that there was a placard issues, the colour or the placard and what date it was issued on + whether its Open/Closed; as to not breach on privacy. Details of the damage, such as descriptions and photos, as well as works needed can be found on the RBA document in the Property File. These are done by adding characteristic flags to the property (like how consent notices/aggressive dogs and people are attached to the property)

Placards will not be able to be removed from the property unless they were issued in error, particularly if they were issued in relation to land. Therefore, we need to specific whether the placard is still open and of concern to council or has been closed.

Initial advice was that legal risk was low (just after the Anniversary floods) however the longer we waited on getting this information updated, the higher the risk got if something went wrong.

Ongoing discussions are needing to be had around how we treat the Sites/Flats/Units/Occupancy properties in the future and the logistics around how it all appears on the LIMs.

# Document Examples

## Rapid Building Assessment PDF

Documents are named in the format of councils current naming conventions, which include NOT transaction that they relate to + event that caused the RBA + property ID

Documents contain Assessors detail (Name/ID/Local Authority), Date/Time of Assessment, Building Location Details, Photos (if there are any), Details of the assessment damage + notes/further actions that are required

*\* Address' have been redacted for privacy reasons*

NOT21666232\_RB  
23\_Flood\_114964

NOT21667272\_RB  
23\_CycloneGabriel

## LIMs

Example of wording to appear on the LIM highlighted yellow from Page 5

LIM Example

# Lessons learned

## What went well:

- Good lines of communication with a good roadmap in the interim stages
- Great collaborated between multiple different departments (Regulatory, Legal, ICT, Communications, Property Data)
- Skilled people who knew what was needed from each perspective.
- Ability to prioritise and work to quick time frames
- Able to adapt to the unexpected
- Future proofing to the best of our ability
- Improvements made to Survey123. Particularly the need for people having to manually identify property IDs and the predictive address searches
- Creation of new INB/NOT types in SAP to maintain information in the council database
- Migration of information and documentation (photos) from Survey123

## What we could improve:

- Automate the generation of survey pdfs and migration of documents upload to ACCORD (from Survey123) in bulk without the need for external provider help.
- Automate the creation of Incidents (INBs) and Notices (NOTs)
- Improve cleansing of the data in the early stages
- Remove the reliance of spreadsheets so we are resolving confusion on what is the “true source of truth”

# Where to next

- On going training for users
- Extend property search project as we have a range of service/vanity addresses that are not currently picked up
- End point automation of emails to update customers when new notices are added.
- Continual of process improvements
- FME server view to flag properties that are occupancies
- Compliance monitoring team working on processes of using SAP directly to update/change placards instead of using Survey123 (as this then causes confusion for customers downstream)

# Questions ?

Contact details:

Jade Rutledge – Property Information Technician

[jade.rutledge@aucklandcouncil.govt.nz](mailto:jade.rutledge@aucklandcouncil.govt.nz)

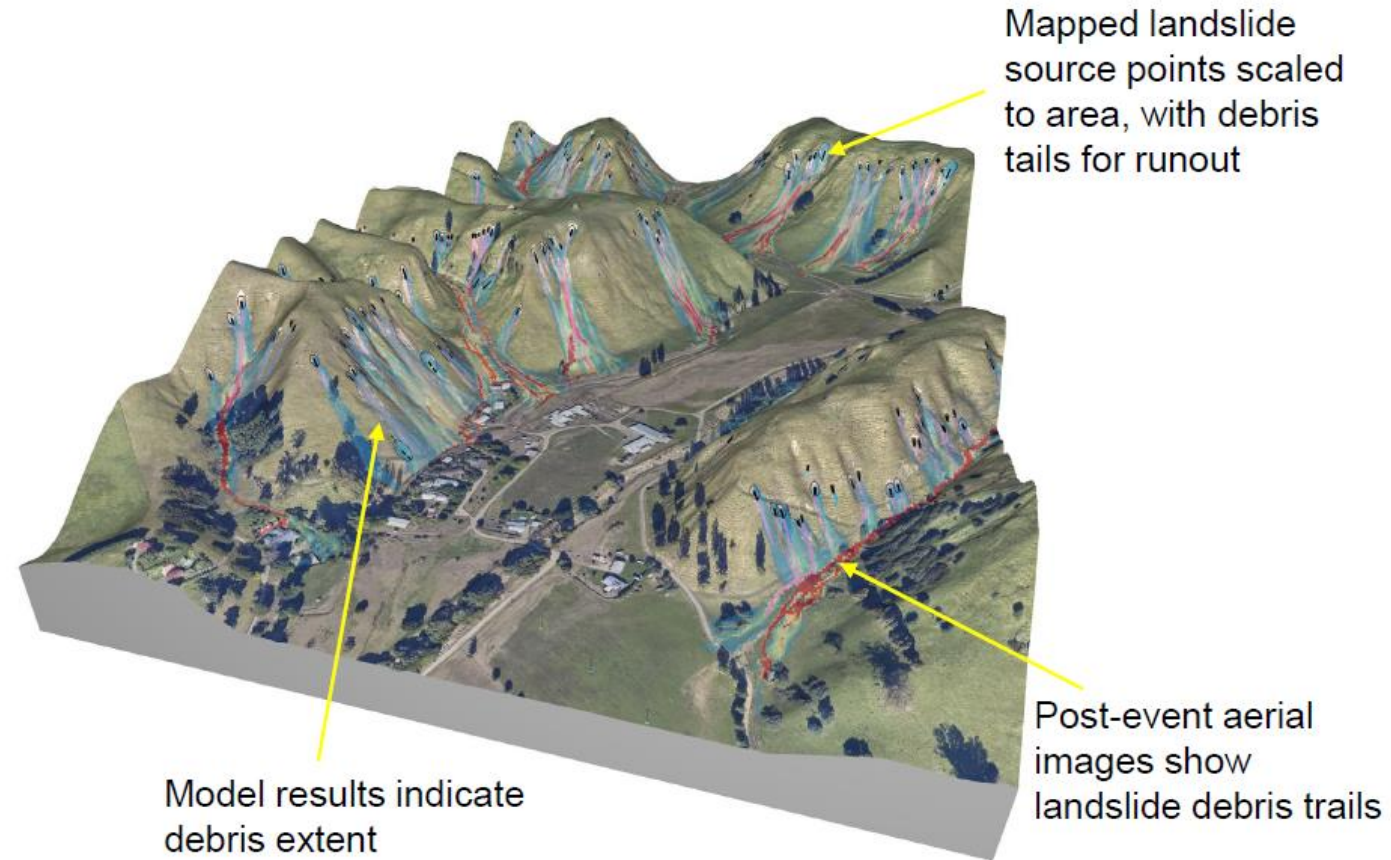

# Introduction: Why map landslides

*Many landslides occurred after Cyclone Gabrielle – destroying infrastructure and lives across the North Island.*

*End users need to know where these landslides (and debris) are and where other landslides could occur in future rain (and EQ) events.*

*Providing valuable underpinning data for development of rainfall induced landslide (RIL) forecast tool, and hazard and risk models*

# Outcomes and stakeholders

Jan 2023

Dec 2023 >

Feb 2023

Feb - Dec 2023

Late 2023 >

Stakeholders are able to have an idea (based on our models) where landslides might have occurred immediately after the event.

Stakeholders are able to know (based on our mapping and imagery) where landslides did occur after the event.

Stakeholders can find out (with improved accuracy) where future landslides may occur in the future (using our models).

Rainfall-induced landslide tool output – landslide probability

Map showing grid cells to be mapped with landslides, coloured by priority

Aerial image showing Ex-Tropical Cyclone Gabrielle landslides (left) with overlaid mapped landslides (right)

Improved model outputs for increased accuracy

Rainfall-induced landslide tool output – landslide impact on roads

**Stakeholders:**  
National rail, road & electricity network agencies; affected local government agencies

# Example data visualization

# Outputs and timelines

Output	Date/timeline
'Raw' & quality checked mapping data showing locations of landslides with given volume and type triggered by Cyclone Gabrielle.	Available now, continually uploaded to webmap stakeholders have access to
Science report outlining methodology used to aid landslide mappers for future events.	Fully published at completion of project (early 2024)
Landslide susceptibility & rainfall-induced landslide forecast models (using existing data for immediate response & Cyclone Gabrielle mapped data for improved accuracy models for long-term use)	Initial models available before, during and immediately after event (February 2023) Improved accuracy models available upon completion of project (early 2024)

Project lead: [Chris Massey \(c.massey@gns.cri.nz\)](mailto:c.massey@gns.cri.nz)  
 Project co-lead: [Kerry Leith \(k.leith@gns.cri.nz\)](mailto:k.leith@gns.cri.nz)  
 Project manager: [Janine Bidmead \(j.bidmead@gns.cri.nz\)](mailto:j.bidmead@gns.cri.nz)

Tom Robinson (UC), Liam Wotherspoon (UofA) & Hugh Smith and Harley Betts (Manaaki Whenua) + 15 students and 10 GNS scientists.

Example of mapped landslides at 1:5000 scale. The first example is a stopbank breach using the 'unclear' movement type

# What is the place of Māori land and property data within disaster recovery?

Shaun Awatere  
Manaaki Whenua

Manaaki Whenua  
Landcare Research

# How can better information and mapping be provided for critical social infrastructure (e.g. marae, papakāinga, and urupa)?

The screenshot shows the homepage of the Māori Maps website. The browser address bar displays <https://maorimaps.com>. The main heading is "Welcome to Māori Maps" with the subtitle "Kia ora and welcome to Māori Maps: Your guide to our home." Below this, there is introductory text and a logo for "māori maps YOUR GUIDE TO OUR HOME".

Find your way to the tribal marae of Aotearoa New Zealand – through maps, information and photographs – through the digital gateway of Māori Maps.

Anyone wishing to go beyond the kōwhiri (gateway) — to walk onto marae, be formally hosted or obtain deeper knowledge — should engage directly with the marae community and its elders.

Te Pūtiki National Trust gathers the information for Māori Maps from public sources and marae community engagement, and holds it in trust for our beneficiaries, the marae of Aotearoa New Zealand.

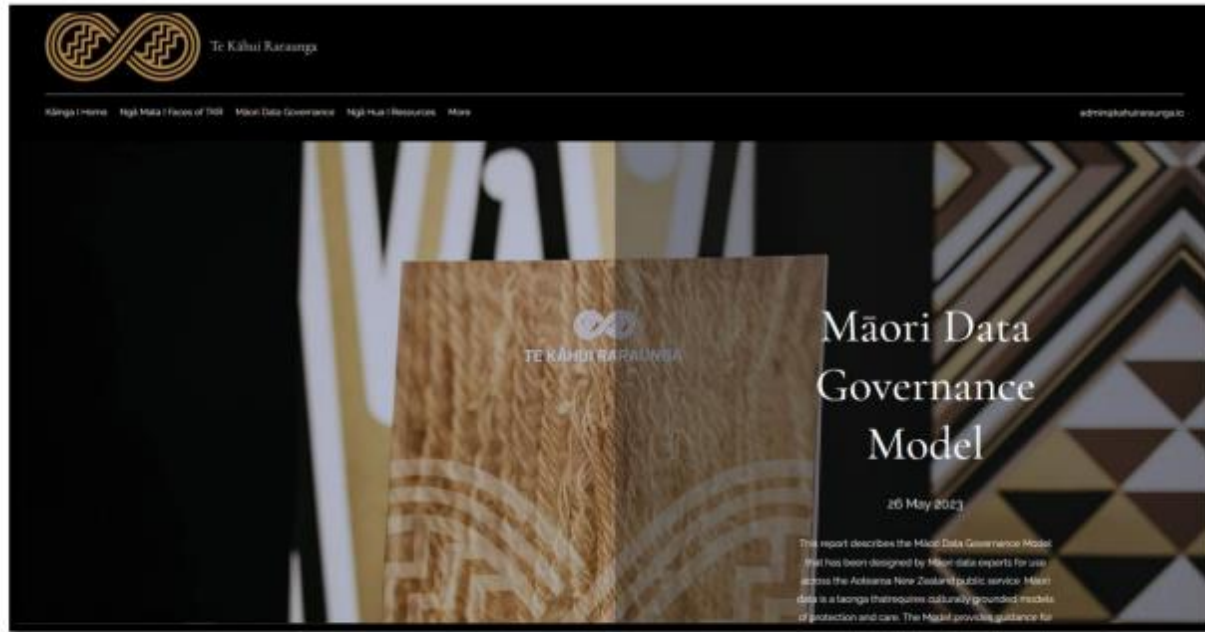

Please contact us to advise of changes or additions to the information about any marae.

The map shows New Zealand with various locations marked by black circles containing numbers: 180 (Whangarei), 77 (Auckland), 260 (Hamilton), 93 (Gisborne), 90 (Wellington), 89 (Napier), 9 (Wellington), 2 (Christchurch), and 6 (Christchurch). A legend on the right side of the map includes the following options:

- Street Map View
- Ingoa Wāhi o Aotearoa
- Aerial Map View
- Māori Land Blocks
- Māori Districts

# How do we define and map local communities, the people, land and properties within their boundaries?

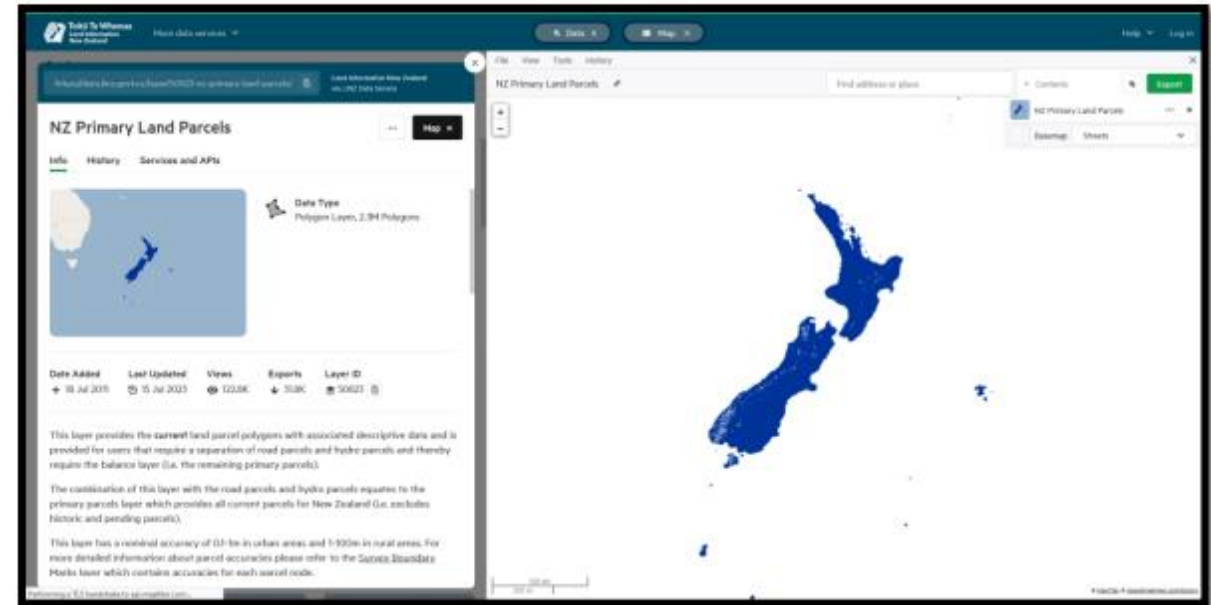

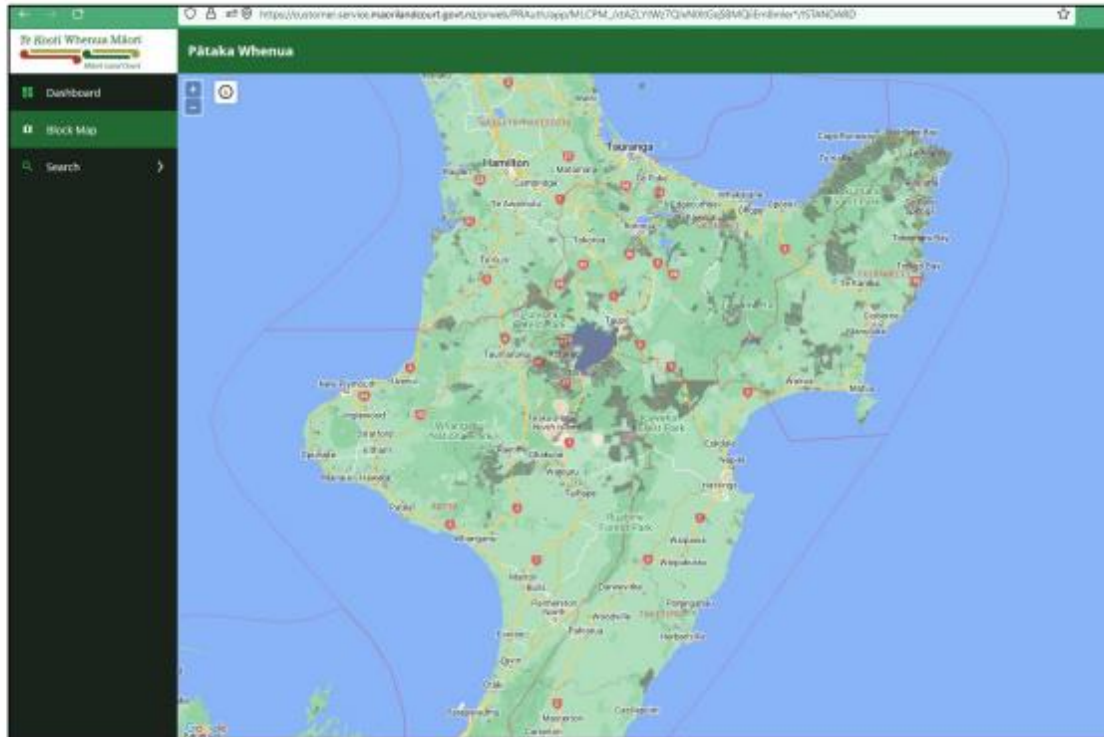

<https://www.kahuiraraunga.io/>

<https://www.tkm.govt.nz/map/>

**Māori land and property data is fragmentary and relatively inaccessible, holding back effective and Tiriti-centred decision making. Central and local government often want to do the right thing but can't empower communities they don't know about.**

# Common Operational Dataset for Emergency Management

Improved data sharing for emergency management

**Rob Deakin**  
Manager Resilience

18 July 2023

# All-of-Government Geospatial Information for Emergencies Leadership Group

# Background

---

- Hard to find, analyse and act on
- Relying on existing relationships
- Unclear which data is authoritative
- Duplicate effort
- Lose valuable time

How might we make geospatial information more accessible before, during and after emergencies for those who need it?

# A shared goal

“Quality **geospatial information** and services are **available** and **accessible** in a **timely** and **coordinated** way to support **decision-making and operations** within and across all sectors and phases of the emergency cycle”

*Strategic Framework on Geospatial Information and Services for Disasters, UN-GGIM, 2017*

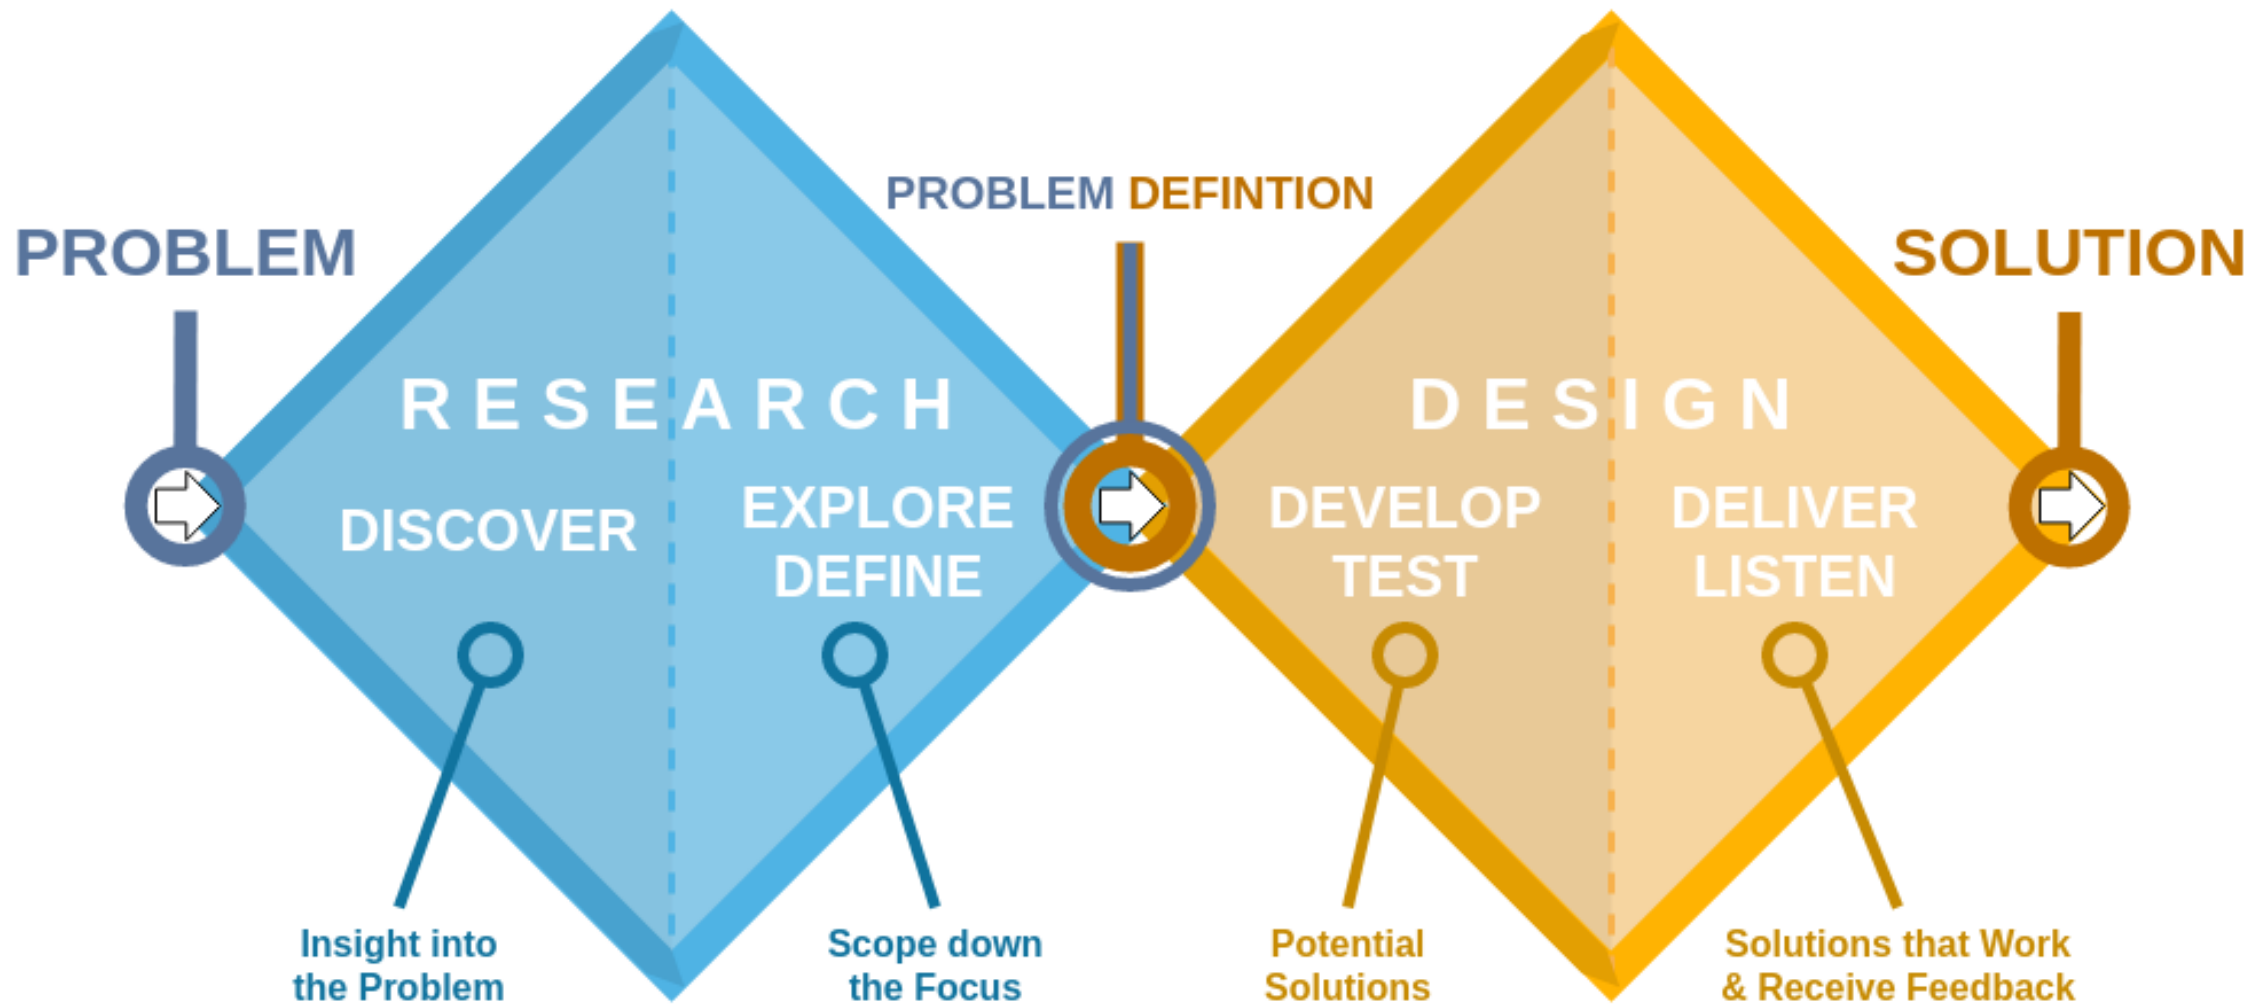

1

DESIGN THE RIGHT THING

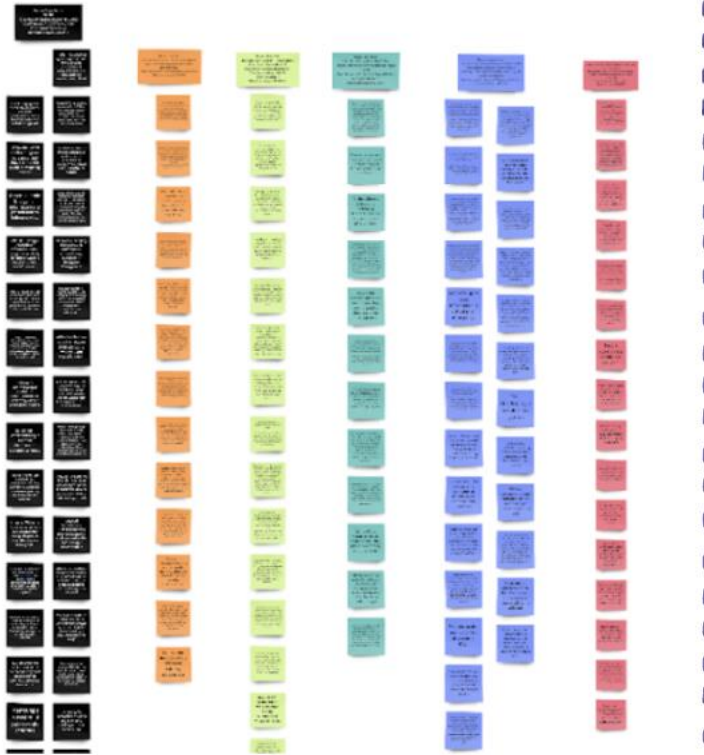

2

DESIGN THINGS RIGHT

# Analysis

## Findings

## Insights

# Our solution

---

**Find data  
easily**

**Trust data is  
valid**

**Before they  
need it**

**Share data  
easily**

**Promote use  
of data**

# A solution in 5 parts

- Web-based catalogue
- Curated data collections
- Data Sharing Agreements
- Data Standards
- Communities of Practice

1. Collection of useful data

2. Clean data based on agreed standard

3. Data aggregated with clear privacy restrictions

4. Data out based on access level

5. Creation of spatial data products

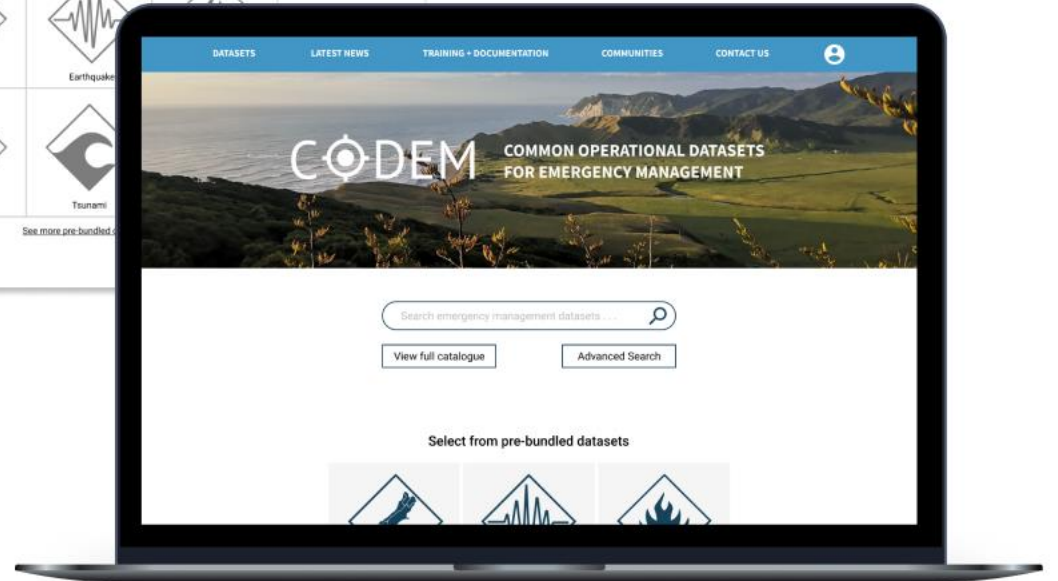

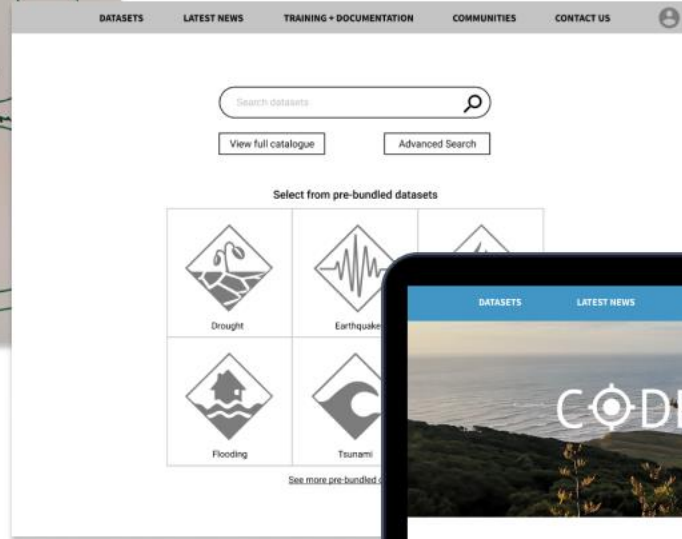

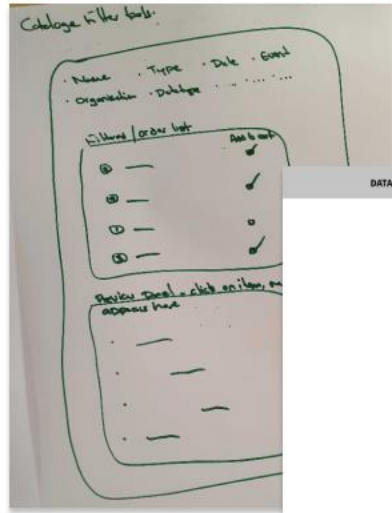

6. Decision making and action

7. Proof of use / good storytelling / education

# Design process

- Research
- Ideation
- Paper-prototype
- Lo-fi wireframes
- Testing and iterating ...
- ↓ High-fi prototype

- Stage 2 focus:
- Iwi / Māori user cases
  - Data sharing agreements
  - Prototype user testing
  - Options assessment
