

Starting soon...

Aotearoa Property Data Network

hosted by Toitū Te Whenua LINZ

Third Meeting - 1-3pm, Tuesday 6th December 2022

Facilitator: Ben Reilly
Customer Relationship Manager – Property Data

**Whatungarongaro te tangata
toitū te whenua.**

**People come and go,
but the land remains.**

Karakia: Toitū Te Whenua

**Whāia te mātauranga kia mārama, kia
tupu, kia tiaki ngā whenua, ngā moana,
ngā arawai**

Pursue knowledge for understanding,
developing and caring for the lands, bodies of
water and waterways

Kia whai take ngā mahi katoa

Seek purpose in all that we do

Aroha atu aroha mai, tātou i a tātou

Let us show respect for each other

Toi te kupu

Hold fast to our language

Toi te mana

Hold fast to our spiritual strength

Toitū te whenua

Sustain the land

Haumi ē, hui ē, tāiki ē!

Gather and go forward together

Agenda

Proposed discussion items

1pm-1:10	Welcome & opening remarks
1:10-1:35	LINZ News & Updates
1:35-1:55	LINZ LiDAR
1:55-2:15	Wellington City Council: Data Strategy update & XML Working Group
2:15-2:35	Lynker Analytics: Data not pixels
2:35-2:55	Critchlow Geospatial: NZ Satellite Imagery Marketplace
2:55-3pm	Closing remarks

LINZ News & Product Updates

Section Contents

- **NZ Localities & Suburbs** – Trent Gulliver, Manager Addressing
- **NZ Addressing** – Trent cont.
- **NZ Properties Hybrid** – Trent cont.
- **Notice of Change** – Mike Webster, CRM Local Government
- **Rating Valuation & DVR Rules Review** – Kerry McGall, Principal Advisor, Operational Policy

NZ Suburbs and Localities (Pilot)

Addressing

Added 15 Sep 2022

2437 201

About Metadata Data Table History Services Comments (0)

The NZ Suburbs and Localities (Pilot) dataset describes the spatial extent and name of communities in urban areas (suburbs) and rural areas (localities) to help locate people and properties. It is based on the NZ Localities dataset which is maintained by Fire and Emergency NZ.

At this stage, NZ Localities continues to be maintained by Fire and Emergency NZ and published on the LINZ Data Service. Toitū Te Whenua Land Information New Zealand will replace NZ Localities in 2023. NZ Localities will continue to be available for a period of six months to allow for the transition to NZ Suburbs and Localities. Updates to both datasets will be required by the Fire and Emergency Communications Centre during this period.

While creating NZ Suburbs and Localities (Pilot), LINZ has taken the opportunity to restructure the data based on customer feedback. Our intention is to make the suburbs and localities data easier to understand and use.

The key changes introduced in NZ Suburbs and Localities (Pilot) are:

- All suburb and locality names are now held in a single field, to replace the 4th, 3rd, 2nd and 1st order names
- New Zealand Geographic Board official place names have been adopted, including macrons.
- Additional name field, to hold alternative common or in-use names
- Each name field has a corresponding ascii field to provide the names without macrons or other special characters
- Territorial Authority has been added
- Small lakes and farms have been removed

- **Out of pilot March 2023**
- **Formal communications to come**

NZ Addresses (Pilot)

Addressing

Licence 10899 588 Updated 21 Nov 2022

About Metadata Data Table History Services Comments (0)

This pilot dataset provides more comprehensive national address data for New Zealand, incorporating previously missing addresses to our official address data.

NZ Addresses (Pilot) comprises both [AIMS addresses](#) and [allocated addresses identified as missing from AIMS gathered from Territorial Authorities](#).

To improve ease of use, this dataset also includes:

- Official locality names from [NZ Localities - NZGB Compliant Names](#)
- Territorial Authority association

Please note: we are still working through a process of identifying missing addresses. NZ Addresses will continue to be populated with missing addresses as they are verified.

[AIMS address set](#) and the simplified version [NZ Street Address](#) will continue to be updated by LINZ as normal as advice is received from Territorial Authorities.

In June 2022, NZ Addresses will become the national, authoritative dataset for physical addresses, replacing NZ Street Address.

Update August 2022 - Customer feedback identified an issue which is generating some duplicate addresses in NZ Addresses. We hope to resolve this as soon as possible and publish NZ Addresses as the national, authoritative dataset for physical addresses.

About the validation process

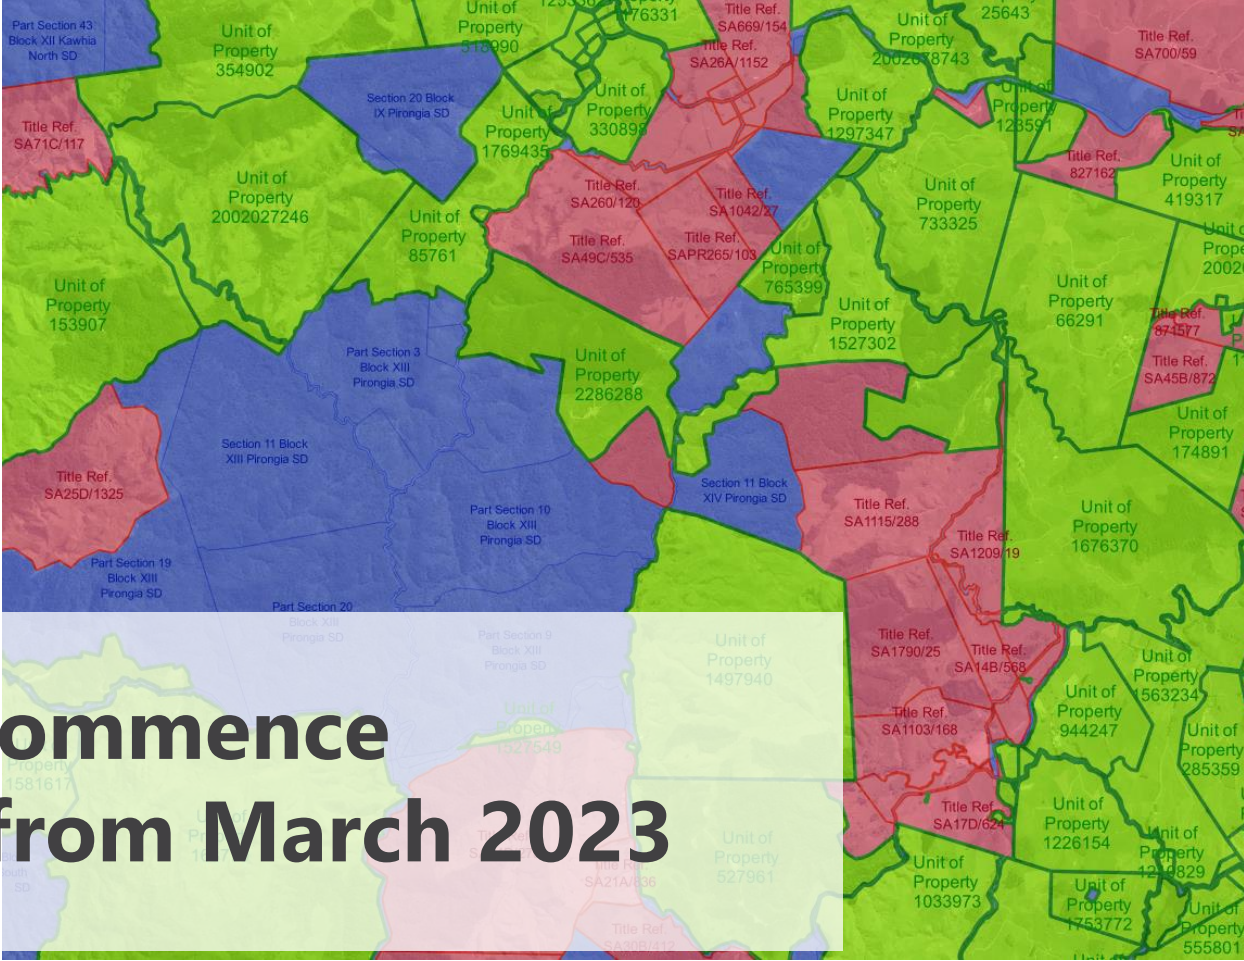

Streets Find address or place..

200 km 200 mi

Basemap © MapTiler © OpenStreetMap contributors

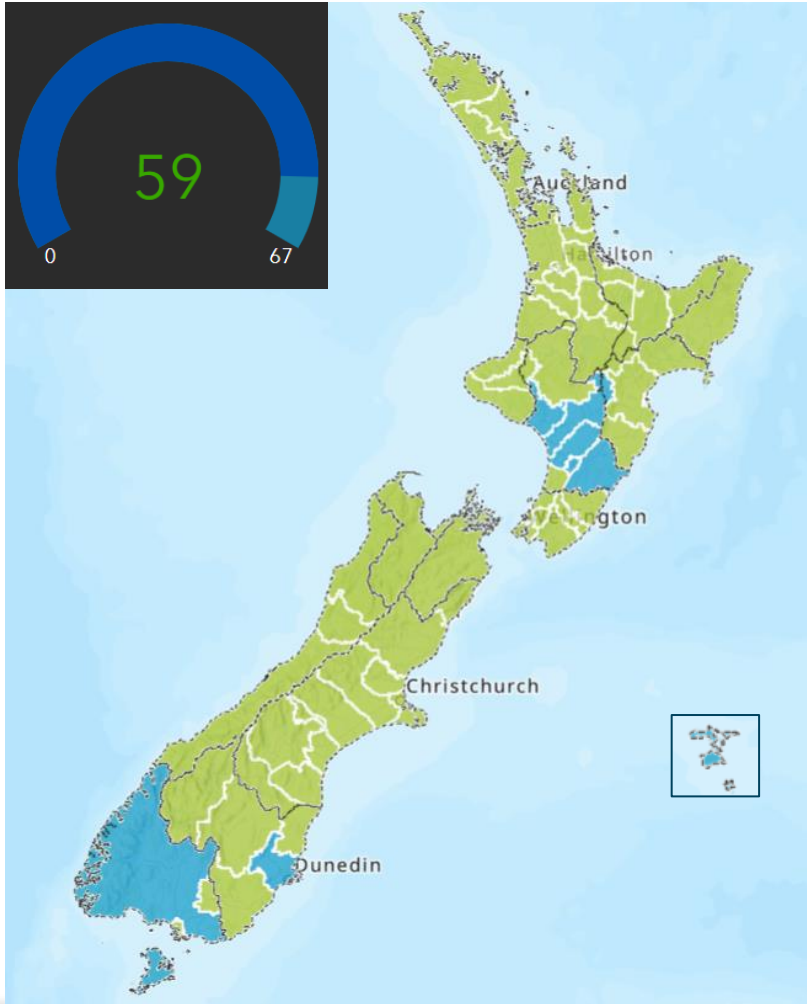

- Out of pilot early 2023
- Authoritative
- Formal communications to come

NZ Properties Hybrid

- Work about to commence
- Likely available from March 2023

Notice of Change

XML

- Going live 12 Dec with improvement for VSPs in most locations
- Working group with TAs underway
- Meeting with software developers (e.g. MAGIQ) about XML integration

Rating Valuation & DVR Rules Review

- Rating Valuation rules review has started.
- Initial focus is on gaining an understanding of how valuation providers manage, store transfer the District Valuation Roll (DVR) data.
- Significant change in the structure and content of the DVR is expected out of this process.
- Engagement with the sector will increase in 2023

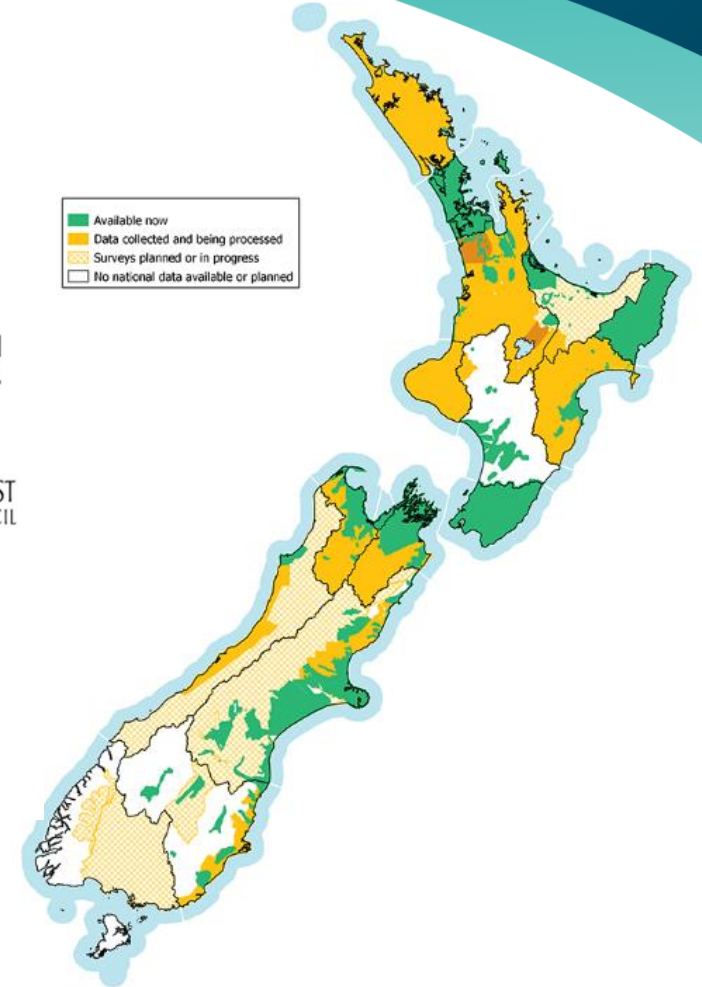

LiDAR

Welcome Guest ([Sign In](#))

1.000m Auckland North LiDAR 1m DEM (2016-2018)
National Elevation

[About](#) [Metadata](#) [Tiles Table](#) [Analytics](#) [History](#) [Services](#) [Comments \(0\)](#)

This layer contains the DEM for LiDAR data in the northern Auckland Region captured between 2016 and 2018.

- The DSM is available as layer [Auckland North LiDAR 1m DSM \(2016-2018\)](#).
- The index tiles are available as layer [Auckland North LiDAR Index Tiles \(2016-2018\)](#).
- The LAS point cloud and vendor project reports are available from [OpenTopography](#).

LiDAR was captured for Auckland Council by Aerial Surveys from 16 August 2016 to 9 August 2018. These datasets were generated by Aerial Surveys and their subcontractors. Data management and distribution is by Toitū Te Whenua Land Information New Zealand.

Data comprises:

- DEM: tif or asc tiles in NZTM2000 projection, tiled into a 1:1,000 tile layout
- DSM: tif or asc tiles in NZTM2000 projection, tiled into a 1:1,000 tile layout
- Point cloud: las tiles in NZTM2000 projection, tiled into a 1:1,000 tile layout

Pulse density specification is at a minimum of 4 pulses/square metre.
Vertical Accuracy Specification is +/- 0.2m (95%).
Horizontal Accuracy Specification is +/- 0.6m (95%).
Vertical datum is NZVD2016.

December 6th, 2022

Our Mission

We have specialist expertise in machine learning, remote sensing and geospatial analytics. We build tools to extract new insights about the earth's surface including the marine and built environment from satellite imagery, aerial photography, unmanned and remote operated vehicles, Lidar, CCTV and other sensors.

Using neural networks and related AI techniques we can monitor and measure change in the environment at local, city, national and asset scales to support better decision making. #AI4EO

Settlement Analysis

Roof material & condition

Buildings and Roads

Roof Analysis – Christchurch City Council

The purpose of this work was to help to better understand the contributions of roof material run-off contaminants entering the city's stormwater network.

The main goal of this study was to inform the proportions of zinc-coated roofs and secondly to estimate the condition of metal roofs across the entire city.

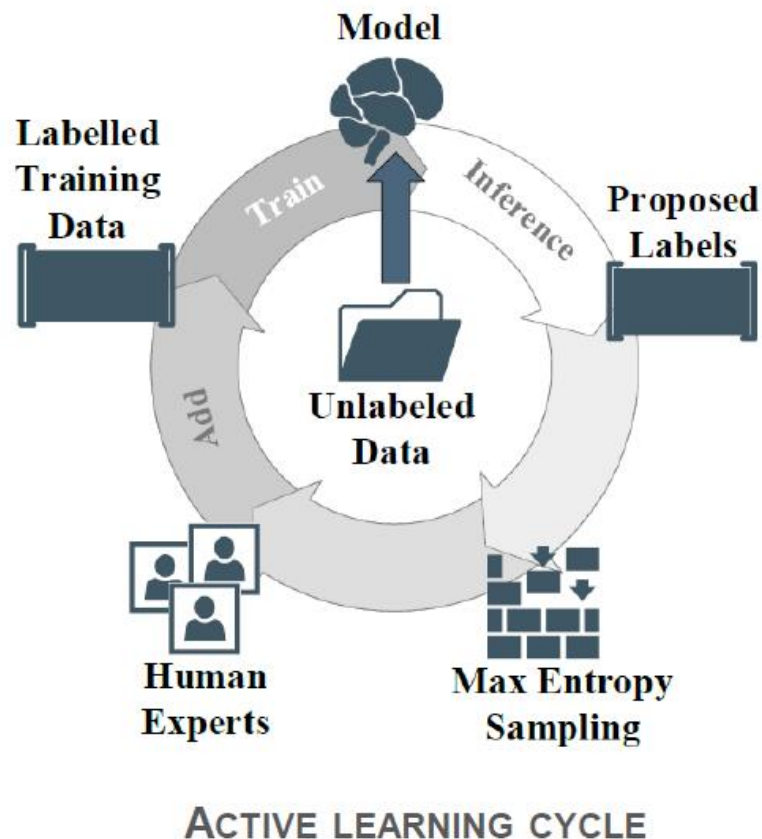

Two imagery sets were used:

1. Airbus Pléiades 0.50m pan sharpened satellite imagery captured on 25 March 2022. Pléiades imagery has a four-band response in the visible red, green, and blue, and near infrared (referenced as RGBI), with a higher resolution panchromatic (greyscale) image.
2. Orthophotography for the Canterbury Region captured in December 2020 to February 2021. Coverage encompasses Christchurch City and Banks Peninsula townships. Imagery supplied as 7.5cm pixel resolution (0.075m GSD), 3-band (RGB) uncompressed GeoTIFF.
3. Building Outlines

Four models were developed including:

1. A supervised remote sensing classification model using the satellite image area
2. A deep learning image classification model trained using active learning to discriminate metal and non-metal
3. A deep learning image classification model to discriminate poor condition metal roofs from good condition roofs
4. A machine learning ensemble model to predict a final roof condition (decay index)

Predictions and confidences from the first two models, alongside existing council datasets, were used to train the final ensemble model.

SATELLITE IMAGERY MARKETPLACE

MAXAR

- Subscription access available
- 20-year archive
- 0.3 – 0.5m resolution
- 8 band multispectral
- 6 new 0.3m Legion satellites launching starting January 2023
- Legion provides up to 15 revisits per day

- Fast growing SuperView constellation
- 0.3 – 0.5m resolution
- Tasking based
- Daily revisits currently
- 2 SuperView-Neo satellites at 0.3m
- Plan is for 16 SuperView-Neo satellites

- 91 accessible earth observation satellites in orbit
- 3 EarthScanner satellites with 136-150km wide swaths (capture Whangarei – Dunedin in 3 mins)
- The DailyVision (0.75m) tasking-based constellation currently provides 18 revisits per day with 15-minute targeting from 9:00 am to 12:30 pm
- HyperScan – 3m RGB, 5m multi-spectral visits every 2 days. Capturing 1-2 passes over NZ per month
- Several medium resolution special purpose agricultural monitoring satellites

SI Imaging

- SI Imaging's KOMPSAT-3/3A satellites (0.5 – 0.4 m) are currently capturing on average ~250 scenes per month over all NZ.
- 10-year archive of 15,000+ largely cloud-free images of NZ.
- KompSat-5 radar satellite can be tasked down to 1m resolution or cover large areas at medium resolution.

2019-2022 ≤10% cloud

Total captures: 6,681
66.6% of all captures for the four years

Cloud Cover

- A = 0% (cloud free)
- B = From 0% to 10%

SATELLOGIC®

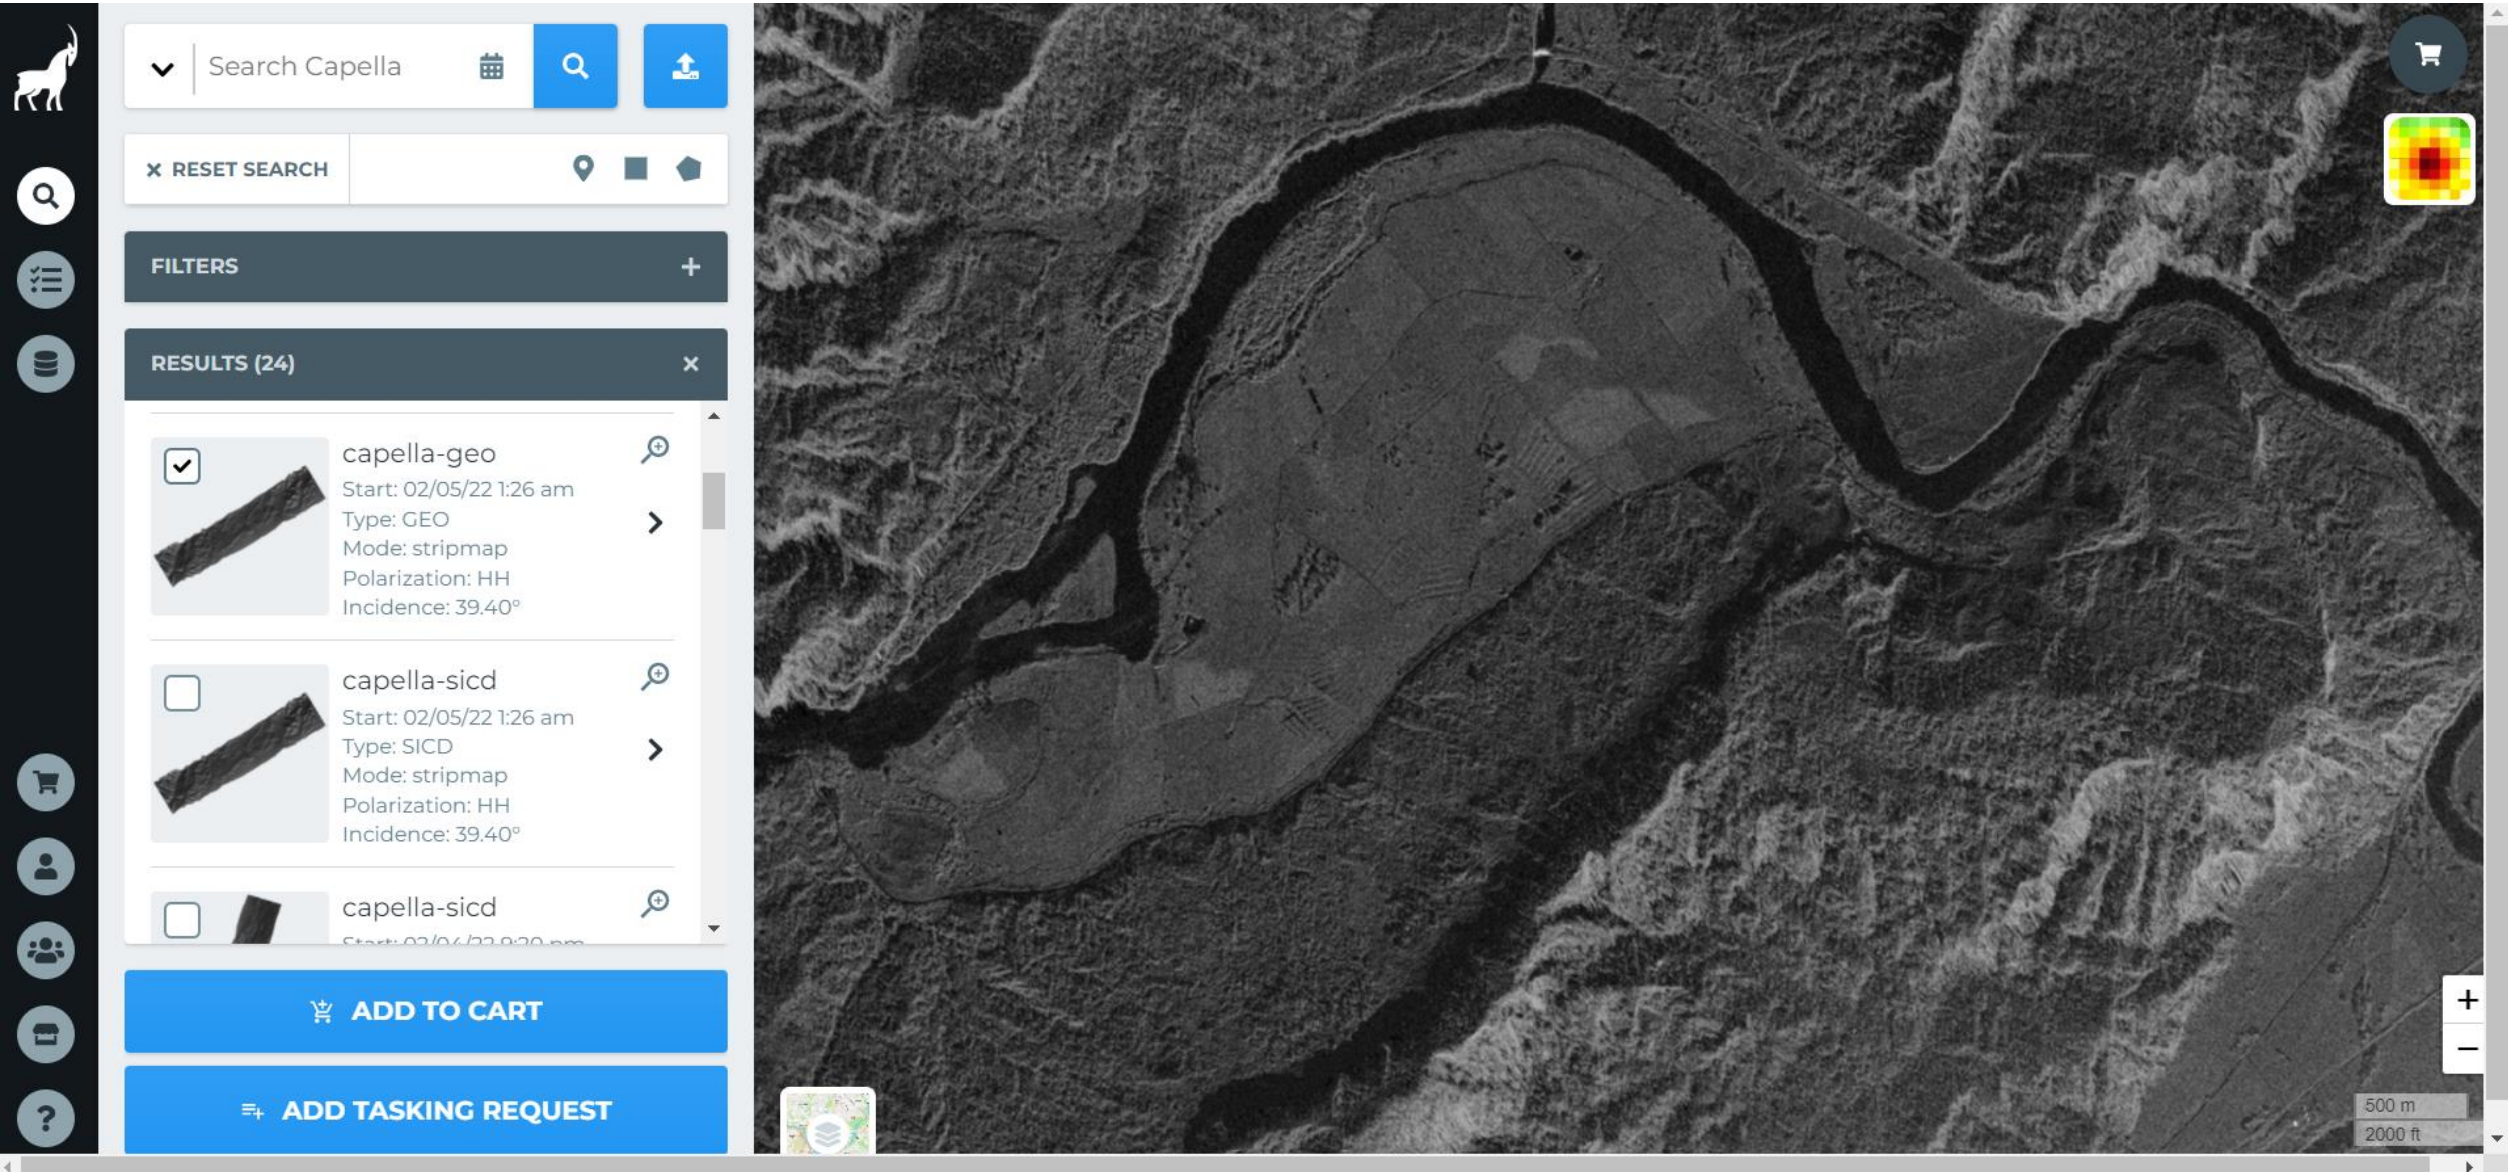

- Low-cost, rapid delivery tasking options
- Satellogic's current constellation of 26 satellites (0.7 m) can currently provide up to 5 re-visits per day.
- This will grow to 40 re-visits per day with 200 satellites by 2025.
- Mainly tasking-based, but with 40 satellites in their constellation in 2023, they plan for monthly re-mapping of the planet.
- Daily re-maps of the planet with the 200 satellites in 2025.

Self-service tasking + delivery

The screenshot displays the Capella Space user interface for satellite tasking. On the left, a vertical navigation bar contains icons for home, search, filters, results, cart, profile, team, and help. The main interface is divided into a left sidebar and a large central map area.

Search and Filters: At the top left, there is a search bar with the text "Search Capella" and a search icon. Below it is a "RESET SEARCH" button. A "FILTERS" section with a plus sign is also visible.

RESULTS (24): A list of search results is shown, each with a checkbox, a small satellite stripmap thumbnail, and a magnifying glass icon. The first result is checked and includes the following details:

- capella-geo
- Start: 02/05/22 1:26 am
- Type: GEO
- Mode: stripmap
- Polarization: HH
- Incidence: 39.40°

The second and third results are "capella-sicd" with identical start times and parameters. Below the list are two prominent blue buttons: "ADD TO CART" and "ADD TASKING REQUEST".

Map Area: The central part of the interface is a large grayscale satellite image showing a winding river or canal system through a landscape. In the top right corner of the map, there is a small heatmap overlay. In the bottom right corner, there is a scale bar showing "500 m" and "2000 ft", along with zoom in (+) and zoom out (-) controls.

Early Adopter partner

- Pixxel is building a constellation of hyperspectral earth imaging satellites and the analytical tools to mine insights.
- The constellation is designed to provide global coverage every 24 hours, with the aim of detecting, monitoring and predicting global phenomena.

If you need to see objects in greater detail, then you will want to consider NTT Data's AW3D, the world's most precise global 3D map. AW3D covers all global spaces with 5 metre resolution. In urban areas, 3D data is available at 0.5 metre resolution. AW3D utilises Maxar Technologies' satellite images.

- NTT Data is our provider of high-resolution satellite-derived 3D elevation datasets.
- Often used for radio frequency planning by telcos for mobile networks eg. locating 5G cell sites
- Have recently completed 3D model of entire UK

NEW ZEALAND

SATELLITE IMAGERY MARKETPLACE

It makes it easier for you to compare options to build your own shortlist from popular satellite imagery providers

- Resolution
- Imagery bands
- Price bands
- Minimum area sizes
- Access to archives
- Tasking availability

www.critchlow.co.nz/satellite-imagery-marketplace

Side-by-side comparison and shortlisting tool

The image shows a side-by-side comparison of two satellite imagery options. The left panel displays '10m Sentinel-2' imagery, which is significantly more pixelated than the right panel's '0.5m SuperView' imagery. Both panels include a control bar with zoom in (+) and zoom out (-) buttons, and a search icon. Below the imagery, a comparison table provides key specifications for each option.

10m Sentinel-2	0.5m SuperView
Spatial Resolution: 10 m	Spatial Resolution: 0.5 m
Available Imagery Bands: 4	Available Imagery Bands: 4
Archive Price Band: Free to \$\$\$	Archive Price Band: Free to \$\$\$
New Tasking Price Band: N/A	New Tasking Price Band: Free to \$\$\$
Archive Minimum Order: None	Archive Minimum Order: 25 km ²
New Tasking Minimum Order: N/A	New Tasking Minimum Order: 100 km ²
