So much space. So much time.

New Zealand is the geospatial dream. So what are you waiting for?

The time is right now.

Find out more at http://workinggeo.org.nz
New Zealand is looking for experienced geospatial specialists – right now.

There’s so much we could tell you about life in New Zealand, but it’s what you have to say that interests us.

In New Zealand, we’ve got a whole lot of space, and a whole lot of time. We’re a geospatial dream.

New Zealand - the land of space and time.

You’re a geospatial specialist, so there’s not much we can tell you about the space, other than the fact that in New Zealand, there is more space for everybody - more room to be who you are. And as for time – you’ll be expected to put quality time into your job for sure, but without the sheer number of people found in many countries, you’ll have quality time for other things in your life.

Whether you’re working on managing the expansion of our largest city, helping to build a Christchurch fit for the future, or even immersing yourself in the fascinating worlds of agriculture and forestry - your geospatial insight is your ticket to the life you’ve dreamed of.

You might be a family person looking for a better way, an outdoor adventurer or someone who simply wants to put space and time back in your life.

There’s so much we could tell you about life in New Zealand, but it’s what you have to say that interests us.

In New Zealand, we’ve got a whole lot of space, and a whole lot of time. We’re a geospatial dream.

This is who we are looking for

We need more skilled people to work in an area known as ‘Other Spatial Scientist’. This has been identified as a key skills shortage. The official description is someone who ‘acquires, integrates, analyses, interprets, presents, manages and distributes information about locations in space and time, and develops related equipment, software and services’.

Other terms for people doing aspects of such work include: GIS Developer, GIS Analyst, GIS Administrator, GIS Consultant and Geospatial Information Architect. The qualification and experience requirements are ‘Bachelor degree specialising in Geography or Computer Science and a minimum of two years of relevant experience’.

Jana Kaeppler from Germany works for the Mackenzie District Council:

“...our relatively small New Zealand GIS community is like a big family – guards-down constructive, helping each other and working together on great spatial ideas for the future.”

Trish Merz of Canada works for Eagle Technology in Wellington:

“I really do feel that New Zealand is the land of opportunity. Employers are crying out for skilled geospatial professionals and now it’s much easier to make the move, have a rewarding career and benefit from the great Kiwi lifestyle.”
